

Amendments to the Specification:

Please replace the Abstract with the following amended Abstract:

ABSTRACT

A process is provided herein for preparing molecularly imprinted polymers for detecting a target analyte by Reversible Addition Fragmentation Chain Transfer (RAFT). The process includes providing a complex having the formula $L_23\#194M\ L_3M$ wherein L is a β -diketone ligand containing a chain transfer moiety and $L_23\#194\ L_3$ can be the same or different ligands, and M is a lanthanide element; reacting the complex with the target analyte to provide an adduct containing the target analyte; co-polymerizing the adduct with a monomer and cross-linking agent to provide a polymer; and, removing the target analyte from the polymer to provide a molecularly imprinted polymer.
